

DME Extra Virgin Coconut Oil

This oil is made directly from fresh mature coconuts

Semi-bulk supplies available

200 litre open-top drums
and
1,000 litre liquid 'pods'

NASAA Certified
Organic 8105P

*Inventors of the DME Process
Empowering and Bringing Hope*

The Mission of Kokonut Pacific

To provide remote island communities with the Direct Micro Expelling (DME) technology that enables them to produce pure virgin cold-pressed coconut oil on their farms for local markets and for export.

We empower and bring hope

DME Extra Virgin Coconut Oil

Pure and Natural - Organic and Unrefined - Cold Pressed

Organically Certified Coconut Oil produced by Solomon Island Villagers within one hour of opening a coconut

Coconut

The Oil of Life

Fresh from the Islands

DME™ Extra Virgin Coconut Oil is a completely natural, Organically Certified **virgin coconut oil**.

DME™ Extra Virgin Coconut Oil is nutritious and healthy, aromatic and flavoursome.

Direct Micro Expelling (DME™)

Invented by **Kokonut Pacific**, the DME system enables farmers in the South Pacific to produce virgin oil within one hour of opening a coconut. **It is cold-pressed, pure and natural, organic and unrefined.** This special oil is now available for the world market.

Coconut Oil is the most versatile of all vegetable oils. As a saturated oil, it is extremely stable with an almost indefinite shelf life.

Coconut oil has no cholesterol

Its chemical structure means that it is rapidly metabolized by the body and is an excellent source of energy.

It is uniquely rich in Lauric fatty acid (> 48%) which is a prime ingredient in mother's milk and helps build up the body's immune system.

It is an excellent cooking oil which enhances the flavour of many foods. www.westonprice.org/know_your_fats/oiling.html and coconut_oil.html www.bantransfats.com

The Tree of Life

The coconut palm is called the **Tree of Life** because it meets so many basic human needs — food, fuel and shelter. This palm produces nuts every month of the year.

The main export crop is copra, the dried white flesh of the nut. It takes months for this raw material to reach the industrial processing plants in Europe or Asia. By then the copra is very dirty and rancid so that when the oil is extracted it must be chemically refined, bleached and deodorised (RBD).

Direct Micro Expelling (DME™) takes oil production right back to the farm. Rural families who grow their coconuts on tropical coasts without the use of fertilisers or chemical inputs can now produce **pure virgin coconut oil**.

Sustainability

Many tropical coastal communities are the custodians of unique endangered cultures, languages, reefs and rainforests. The coconut is their most sustainable agricultural resource. **DME** provides rural people with meaningful employment, a regular income and better living standards.

Kokonut Pacific is passionate about using DME to build partnerships for **Fair Trade**, as in the Solomon Islands.

Your purchase of this premium oil creates a better livelihood for many islanders and helps protect their environment.

The DME Project was chosen as an ecologically sustainable World Project at EXPO2000.

A Healing Oil

For centuries traditional healers in India (Ayurveda) and the South Pacific have used Coconut Oil for massage to soothe and cool the body.

It is used to alleviate symptoms of eczema, and other milder skin ailments, such as nappy rash. Because it is absorbed quickly by the skin, it does not leave a sticky feeling.

Virgin coconut oil tastes good, is easy to digest and is a quick energy source for young and old.

Current scientific research shows it has significant anti-viral, anti-bacterial and anti-fungal properties. This is because it is nature's richest source of medium chain triglycerides (MCTs). Coconut oil is a "low fat" fat which stimulates metabolism and promotes weight loss.

The Oil with so many uses

- Natural health food
- Cooking oil
- Raw and fresh bread spread
- Stable carrier oil for other dietary supplements
- Skin moisturiser
- Massage Oil
- Baby Oil
- Hair Oil
- Base ingredient for organic cosmetics
- Best oil for premium soap and shampoo - with natural glycerine - it even lathers in salt water.

Managing Virgin Coconut Oil

DME Extra Virgin Coconut Oil is a clear or slightly cloudy liquid at temperatures above 26°C. As it cools it forms white 'pearls' and starts to solidify. Below 22°C it is a snow white solid. If the oil is solid, place the container in warm water to melt it, or simply scoop it out.
